

# recruiter-in-a-box

How I used Claude AI to help find a job search make my application process a little easier.

# Job Hunting is the worst

- Endless searching across too many websites
- Stale, out-of-date job application links
- Redundant data entry
- Hurry up and wait

# I can't help with all that, but...

I can:

- Encourage you. (Keep going!)
- Reassure you. (You will get through this!)
- Show you what I've learned. (Use this!)

Most of the interviews I received were through networking.

But this method is what actually got me a job.

# This is how I search for jobs:

# First, I search for jobs:

## jobSearch

“Use jobSearch to find 5 jobs to apply for”

✶ Afternoon, Mike

Use jobSearch to find 5 jobs to apply for

### jobSearch results — 5 validated jobs (Sep 11, 2026)

Each title links to the employer's own apply page. Every link was re-checked at 10:25 AM PT, and none showed signs of being closed.

| # | Job Title                                         | Company   | Salary        | Posted     | Why you're competitive                                                                  |
|---|---------------------------------------------------|-----------|---------------|------------|-----------------------------------------------------------------------------------------|
| 1 | <a href="#">Senior Business Analytics Manager</a> | Autodesk  | \$132K-\$236K | 9 days ago | KPI frameworks, a production GTM pipeline, and AI-in-analytics workshops. Oregon-remote |
| 2 | <a href="#">Customer Success Manager</a>          | DataGrail | \$120K-\$140K | Sep 4      | Customer enablement plus analytics for health and churn metrics. Remote                 |

# Then, I convert posts to resumes:

**resumeStart**

“Use resumeStart to for  
<insert job post>”

Use resumeStart for

## Michael J. Aubry

Lead Data and Analytics Insights Analyst | KPI Framework | Metrics Governance | Semantic Layer | Tableau | Databricks  
Beaverton, OR | 503.545.5283 | [maubry@gmail.com](mailto:maubry@gmail.com) | [linkedin.com/in/aubjobm](https://www.linkedin.com/in/aubjobm) | [github.com/maubryPython](https://github.com/maubryPython)

### SUMMARY

Analytics leader and mechanical engineer pursuing the Lead Data and Analytics Insights Analyst role, with 7+ years in enterprise analytics spanning KPI frameworks, metrics governance, master data management, and business intelligence at a \$7.2B design and engineering software company. Builds governed metric catalog definitions, semantic layer logic, and dashboards in Snowflake and Power BI, with Databricks and Tableau applied in a Nike-focused analytics prototype. Translates validated metrics into decision-ready narratives for executives, and brings a product design and development background from CAD, manufacturing, and orthopedic product creation.

### SKILLS

KPI framework, Metric catalog, Metrics governance, Semantic layer, Business intelligence, Analytics product ownership, Applied metric modeling and validation, Tableau, Databricks, SQL, Snowflake, Power BI, Python (Pandas, NumPy, Plotly), R, dbt, Fivetran, Informatica MDM, Salesforce, Data governance, Data quality, Master data management, ETL pipeline design, Relational data modeling, Data dictionaries, Excel, Agile, Scrum, Jira, GitHub, Claude, Cursor, ChatGPT, Fusion 360, Inventor Professional, SolidWorks

### PROFESSIONAL EXPERIENCE

#### Analytics Manager | Autodesk, Inc. | Portland, OR

February 2024 – April 2026

- Prototyped an end-to-end data pipeline for customer segmentation and sales portfolio selection, owning the data model, business-logic SQL, semantic layer definitions, ETL processes, and technical documentation; greenlit from proof-of-concept to production and went live in 2026.

# This method is not magic:

- Treat this as a supplemental job search and application tool. It isn't automatic.
- Do not stop networking. This helps, but most of my opportunities came from my network.
- Don't blindly trust it.
  - Don't submit slop.
  - Always proofread whatever you submit. It's rare, but it will hallucinate qualifications.
- Sometimes the validation links fail. Update as is relevant.

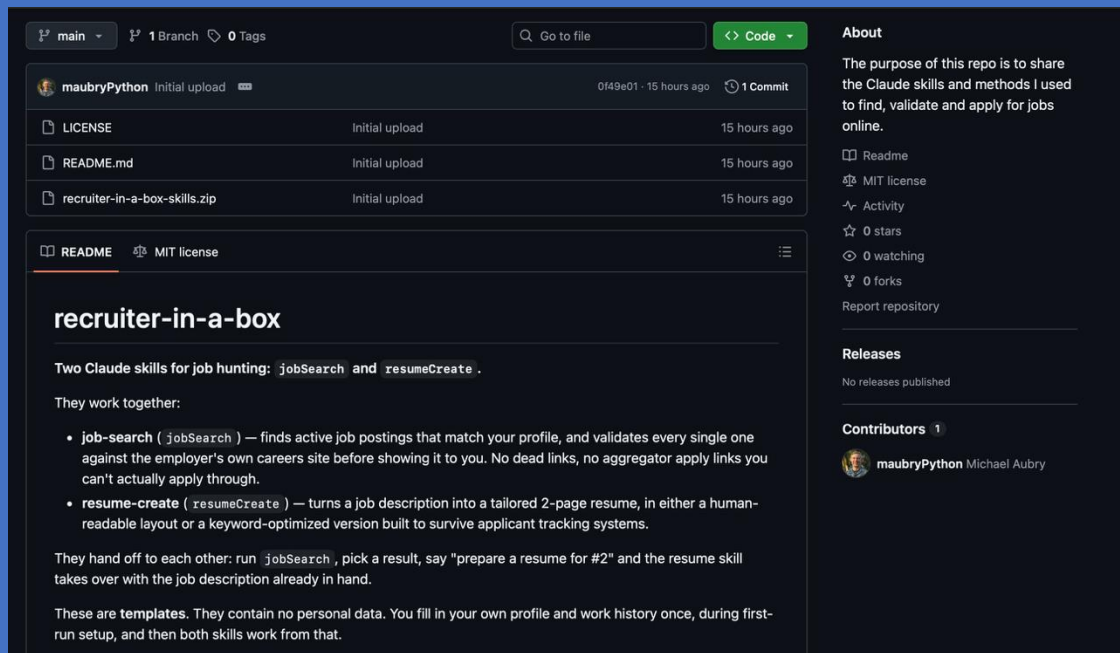

(It will get you started though!)

# Demo

# Where to download:

<https://github.com/maubryPython/recruiter-in-a-box>

The screenshot shows the GitHub repository page for 'recruiter-in-a-box' by user 'maubryPython'. The repository has 1 branch and 0 tags. The file list includes LICENSE, README.md, and recruiter-in-a-box-skills.zip, all initially uploaded 15 hours ago. The README section is expanded, showing the project's purpose: 'Two Claude skills for job hunting: jobSearch and resumeCreate'. It explains that jobSearch finds active job postings and validates them, while resumeCreate turns a job description into a tailored 2-page resume. The README also mentions that the project uses templates and contains no personal data.

**recruiter-in-a-box**

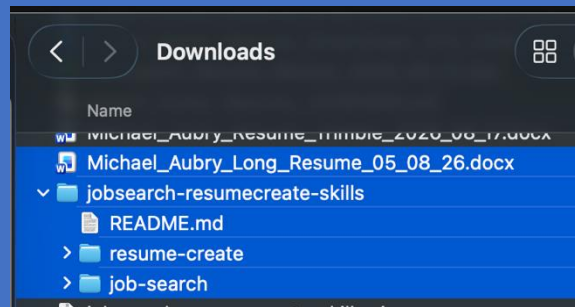

Two Claude skills for job hunting: `jobSearch` and `resumeCreate`.

They work together:

- `job-search` (`jobSearch`) — finds active job postings that match your profile, and validates every single one against the employer's own careers site before showing it to you. No dead links, no aggregator apply links you can't actually apply through.
- `resume-create` (`resumeCreate`) — turns a job description into a tailored 2-page resume, in either a human-readable layout or a keyword-optimized version built to survive applicant tracking systems.

They hand off to each other: run `jobSearch`, pick a result, say "prepare a resume for #2" and the resume skill takes over with the job description already in hand.

These are templates. They contain no personal data. You fill in your own profile and work history once, during first-run setup, and then both skills work from that.

The screenshot shows a mobile device's Downloads folder. The folder contains several files, including a document named 'Michael\_Aubry\_Long\_Resume\_05\_08\_26.docx' and a folder named 'jobsearch-resumecreate-skills'. The folder 'jobsearch-resumecreate-skills' is expanded, showing its contents: 'README.md', 'resume-create', and 'job-search'.
